

Product Overview

T&D Corporation is proud to offer our high precision, compact, durable data loggers. The long battery life and user-friendly software will be sure to raise your data gathering and data maintenance capabilities.

Various Types to Meet your Needs

We offer not only a variety of data loggers to measure and record temperature and humidity, but also voltage, pulse and events.

Long Lasting Battery in a Compact Body

Our long lasting battery and low energy consumption design allow you to record for long periods of time without needless battery changing and worries. This along with the compact body design gives you the freedom to place the units almost anywhere.

Reliable Measurements

Our specially designed measuring method gives you trustworthy measuring without interference from voltage and other environmental influences. All at a cost you can afford.

All Models include Easy-to-Read LCD Panel

Because real time monitoring of data is an essential function, every model we design comes with an easy-to-read LCD display on the face of the unit. Also to meet your needs we have made it possible to change the unit of display depending on what you are measuring.

Gather Data by Wireless, USB or Serial Cable Communication

With our various type of communication, downloading data and controlling the data loggers has never been easier. Choose the type to fit your purposes.

User-Friendly Software
